

FACTORS RELATED TO SELF-CARE BEHAVIORS AMONG OLDER ADULTS
WITH HEART FAILURE IN THAI NGUYEN GENERAL HOSPITAL, VIETNAM

NGUYEN NGOC HUYEN

A THESIS SUBMITTED IN PARTIAL FULFILLMENT OF THE
REQUIREMENTS FOR THE MASTER DEGREE OF NURSING SCIENCE
INTERNATIONAL PROGRAM
FACULTY OF NURSING
BURAPHA UNIVERSITY

JUNE 2011

COPYRIGHT OF BURAPA UNIVERSITY

The thesis of Nguyen Ngoc Huyen has been approved by the examining committee to be partial fulfillment of the requirements for the Master Degree of Nursing Science in Faculty of Nursing of Burapha University

Advisory Committee

..... Principal advisor
(Assistant Professor Dr. Pornchai Jullamate)

..... Co- advisor
(Assistant Professor Dr. Waree Kangchai)

Examining Committee

..... Principal examiner
(Assistant Professor Dr. Tassana Choowattanapakorn)

..... Member
(Assistant Professor Dr. Pornchai Jullamate)

..... Member
(Assistant Professor Dr. Waree Kangchai)

(Dr. Khemaradee Masingboon)

This thesis has been approved by the Faculty of Nursing to be partial fulfillment of the requirements for the Master Degree of Nursing Science in Faculty of Nursing of Burapha University

..... Dean of the Faculty of Nursing
(Assistant Professor Dr. Rarcharneeporn Subgranon)

....., 2011

This thesis was partially and financially supported by Burapha University

Academic year 2011

ACKNOWLEDGEMENT

The success of this thesis was a result of the collaborative and supportive effort from many people. I would like to express my sincere deep gratitude and appreciation to Assistant Professor Dr. Pornchai Jullamate, my major advisor, and Assistant Professor Dr. Waree Kangchai, my co-advisor, for their unending guidance, support and encouragement throughout the thesis process. Due to their help, I am able to complete my thesis as well as my entire study in Thailand.

I also deeply thank to Assistant Professor Dr. Tassana Choowattanapakorn and Dr. Khemaradee Masingboon, examining committee, for providing their suggestions and sharing their research expertise through my study. Great appreciation is offered to all experts and translators giving me in permission and translation of the instruments, Professor Dr. Gregory D. Zimet, Professor Dr. Tiny Jaarsma and Dr. Martje van der Wal. I extend gratefully thank to Assistant Professor Dr. Ronald Markwardt for spending time to edit my paper and make it complete.

Great appreciation is also given to Dean Rarcharneeporn and to the Director of Thai Nguyen University of Medicine and Pharmacy, Vietnam for their initiation of this wonderful opportunity for my study in Master of Nursing Science program at Faculty of Nursing, Burapha University, Thailand and for the financial support during my further study. My sincere thank also goes to Assistant Professor Dr. Narumon Pathumarak, the Director of International Master Program, for her kind assistances, support and encouragement. Especially, I would like to thank for all staffs of Faculty of Nursing and Clinical Nursing Department of Thai Nguyen University of Medicine and Pharmacy, for their hard-work during my 2-year-absence.

Special thanks go to the Director of Thai Nguyen General Hospital, who gave me permission to collect data. I wish to thank all nurses of Cardiology-Rheumatology Unit for their cooperation and help during data collection period. I am gratefully indebted for all older adult patients with heart failure who participated in this study.

Finally, great respect to my beloved husband; Nguyen Tien Dung for his loving, patience, prayer, caretaking, attention, and support throughout my study in Thailand, and to my love son; Nguyen Dai Tung, his prayer and cheerfulness always give his mother more have motivation to finish study. Special thanks go to my parents, parents in law, sisters, and brothers for their prayer, and support. Unforgettable, I offer special thanks to all my friends in Vietnam and Thailand for their giving kindness, helping, solidarity, and togetherness.

Nguyen Ngoc Huyen

NGUYEN NGOC HUYEN: FACTORS RELATED TO SELF-CARE BEHAVIORS AMONG OLDER ADULTS WITH HEART FAILURE IN THAI NGUYEN GENERAL HOSPITAL, VIETNAM. ADVISORY COMMITTEE: PORNCHAI JULLAMATE, Ph.D., WAREE KANGCHAI, D.N.S. 130 P. 2011.

Self-care behavior is known to prevent frequent hospitalizations and reduce the mortality rates among older adults with heart failure. This descriptive correlational study aimed to explore the level of self-care behaviors and to examine the relationships between self-care behaviors among older adults with heart failure and these related factors; gender, income, education level, co-morbidity, knowledge of heart failure and social support. One hundred and twenty-six participants were randomly selected and participated into this study during January to March 2011. The data collection was performed at the Cardiology-Rheumatology Unit, Thai Nguyen General Hospital, Vietnam by using the Demographic and Clinical Data Form, The Dutch Heart Failure Knowledge Scale (DHFKS), the European Heart Failure Self-care Behaviors Scale-9 (EHFScBS-9), and the Multidimensional Scale Perceived Social Support (MSPSS). The reliabilities of DHFKS, EHFScBS-9, and MSPSS were .72, .73, and .74, respectively. Percentage, mean, standard deviation, the Spearman's Rho and Pearson Product Moment Correlation Coefficient were employed to analyze the data.

The results revealed that participants in this study had low level of self-care behaviors. The mean score was 33.58 ($SD = 5.32$), with a range of 22 to 43, out of a possible maximum score of 45. The knowledge of heart failure and social support statistically and significantly correlated with self-care behaviors ($r = .66$, and $r = .53$, $p < .01$, respectively). However, the relationships between gender, income, educational level, co-morbidity and self-care behaviors were not statistically significant.

Nursing intervention programs in regarding of social support and knowledge of heart failure should be recommended for enhancing self-care behaviors of older adults with heart failure.
